INCIDENT DESCRIPTION

Delayed SMS Delivery to Bank Asia Customers on Banglalink

INCIDENT TYPE

SMS Delivery Carrier

AFFECTED CLIENT

Bank Asia

AFFECTED CARRIER / OPERATOR

Banglalink (BL)

AFFECTED SYSTEM

A customer reported not receiving SMS on a Banglalink number. Investigation confirmed the problem was broader — affecting SMS delivery to Banglalink subscribers generally. Bank Asia's scheduled campaign testing across multiple Banglalink numbers confirmed a wider service impact.

IMPACT

Bank Asia customers using Banglalink numbers experienced delayed SMS notifications. Although the SMS API returned successful responses, delivery was delayed at the operator end — affecting both transactional and campaign-related SMS for Banglalink subscribers.

◆ ROOT CAUSE ANALYSIS

ADN Telecom investigated by reviewing SMS API logs and conducting multiple delivery tests to Banglalink numbers. ADN coordinated with Infozillion, who confirmed they were experiencing the same issue — API responses and delivery statuses observed by both parties matched.

Sample API responses observed during the incident:

```
{"serverTxnId":"9bf912c6-e6c7-4929-adeb-69e2a6a7eb9a","serverResponseCode":9000,"serverResponseMessage":"Request successful!","mnoTxnId":"","mnoResponseCode":"","mnoResponseMessage":""}
```

```
{
  "serverTxnId": "59f72009-c178-4bf5-aefa-ff35466e3682",
  "serverResponseCode": 9000,
  "serverResponseMessage": "Request successful!",
  "deliveryStatus": ["8801925751715-Submit Failure"],
  "dndMsisdn": [],
  "invalidMsisdn": [],
  "a2pDeliveryStatus": "Request successful!",
  "a2pSendSmsBusinessCode": 9000,
  "ansSendSmsHttpStatus": "200 OK",
  "ansSendSmsBusinessCode": "1000",
  "mnoResponseCode": "1000",
  "mnoResponseMessage": "Success"
}
```

The issue was at the Banglalink end — SMS submissions were being accepted but not processed and delivered correctly. ADN Telecom infrastructure, API processing, and connectivity were functioning normally throughout the incident.

↑ Continuing from page 1 — Immediate Actions, Long-term Remediation, Team & Closure

◆ IMMEDIATE ACTIONS TAKEN

Upon identifying the issue, the technical team took immediate steps to mitigate the problem and prevent recurrence:

- ✓ **Customer Complaint Verification**
Verified the reported customer issue through internal SMS delivery logs and API records.
- ✓ **Extended Testing**
Conducted additional tests using multiple Banglalink numbers to determine whether the issue was isolated or widespread.

◆ LONG-TERM REMEDIATION

To minimise the impact of similar incidents in the future, ADN Telecom will strengthen monitoring and coordination through:

- Enhanced Operator-Level Monitoring**
Additional monitoring for operator-specific delivery performance and abnormal submission failures.
- Early Warning Mechanisms**
Automated alerting based on delivery anomalies and unusual delivery success patterns.

◆ INCIDENT RESPONSE TEAM

RESPONSE TEAM MEMBERS

- SR Sohael Reza** MD/CEO
Monitored and guided the Incident Response Team throughout the incident lifecycle, ensuring executive oversight and timely decision-making.
- AB Arnob Bhai** CTO
Head of technology who oversaw all technical implementations and coordinated the engineering response to resolve the carrier-side delivery failure.
- SB Sharok Bhai** Techops Engineer
Handled the technical investigation — reviewed API logs, conducted delivery tests, and coordinated with Infozillion to confirm the root cause.

◆ COMMUNICATION

The ADN Team followed the Incident Management process and maintained communication with Bank Asia, Infozillion, and relevant stakeholders throughout the incident lifecycle.

◆ LESSONS LEARNED

- Early validation across multiple test numbers helps quickly determine the scope of an incident.
- Coordination with channel providers is essential for rapid root cause identification.
- Operator-level monitoring can assist in detecting large-scale delivery issues before customer impact escalates.

◆ INCIDENT CLOSURE

- **Incident closed — normal service operation fully restored after Banglalink resolved the carrier-side issue**

The incident was caused by a service issue at the Banglalink end affecting delivery to their subscribers. ADN Telecom's SMS platform and API services remained operational throughout. After Banglalink resolved the issue, all delayed messages were delivered successfully and normal service operation was restored.
