INCIDENT DESCRIPTION

Delayed SMS Delivery to Bank Asia Customers on Banglalink

AFFECTED SYSTEM

A customer reported not receiving SMS notifications on a Banglalink (BL) number. Following the complaint, ADN Telecom initiated an investigation to identify the cause of the issue. During the investigation, it was discovered that the problem was not limited to the reported customer but was affecting SMS delivery to Banglalink subscribers more broadly. As Bank Asia had a scheduled campaign, additional testing was conducted using multiple Banglalink numbers, which confirmed a wider service impact.

IMPACT

Bank Asia customers using Banglalink mobile numbers experienced delays in receiving SMS notifications. Although the SMS API returned successful responses, message delivery was delayed at the operator end. This impacted both transactional and campaign-related SMS communications intended for Banglalink subscribers.

ROOT CAUSE ANALYSIS

Upon receiving the customer complaint, ADN Telecom performed an investigation by reviewing SMS API logs and conducting multiple delivery tests to Banglalink numbers.

During the investigation, ADN Telecom coordinated with Infozillion, who confirmed that they were experiencing the same issue when sending SMS towards Banglalink. The API responses and delivery statuses observed by Infozillion matched those recorded by ADN Telecom.

Sample API responses observed during the incident:

```
{"serverTxnId":"9bf912c6-e6c7-4929-adeb-69e2a6a7eb9a","serverResponseCode":9000,"serverResponseMessage":"Request successful!","mnoTxnId","mnoResponseCode","mnoResponseMessage"}
```

```
{
  "serverTxnId": "59f72009-c178-4bf5-aefa-ff35466e3682",
  "serverResponseCode": 9000,
  "serverResponseMessage": "Request successful!",
  "deliveryStatus": [
    "8801925751715-Submit Failure"
  ],
  "dndMsisdn": [],
  "invalidMsisdn": [],
  "a2pDeliveryStatus": "Request successful!",
  "a2pSendSmsBusinessCode": 9000,
  "ansSendSmsHttpStatus": "200 OK",
  "ansSendSmsBusinessCode": "1000",
  "mnoResponseCode": "1000",
  "mnoResponseMessage": "Success"
}
```

Based on the investigation findings, the issue was determined to be at the Banglalink end, where SMS submissions were being accepted but were not being processed and delivered correctly. ADN Telecom infrastructure, API processing, and connectivity were functioning normally throughout the incident.

◆ IMMEDIATE ACTIONS TAKEN

Upon identifying the issue, our technical team took immediate steps to mitigate the problem and ensure it does not recur. The following actions have been implemented:

✓ **Customer Complaint Verification:**
Verified the reported customer issue through internal SMS delivery logs and API records.

✓ **Extended Testing:**
Conducted additional tests using multiple Banglalink numbers to determine whether the issue was isolated or widespread.

◆ LONG TERM REMEDIATION

To minimize the impact of similar incidents in the future, ADN Telecom will continue to strengthen monitoring and coordination processes through:

✓ **Enhanced Operator-Level Monitoring**
Additional monitoring for operator-specific delivery performance and abnormal submission failures.

✓ **Early Warning Mechanisms**
Automated alerting based on delivery anomalies and unusual delivery success patterns.

◆ INCIDENT RESPONSE TEAM

SR **Sohael Reza** MD/CEO
Monitored and guided the Incident Response Team

AB **Arnob Bhai** CTO
Head of technology who oversaw the technical implementations by the team

SB **Sharok Bhai** Techops Engineer
Handled the issue

◆ COMMUNICATION

The ADN Team followed the Incident Management process and maintained communication with the customer, Infozillion, and relevant stakeholders throughout the incident lifecycle.

◆ LESSONS LEARNED

LESSONS LEARNED
Early validation across multiple test numbers helps quickly determine the scope of an incident.
Coordination with channel providers is essential for rapid root cause identification.
Operator-level monitoring can assist in detecting large-scale delivery issues before customer impact escalates.

◆ INCIDENT CLOSURE

● **The incident was caused by a service issue affecting SMS delivery towards Banglalink subscribers. ADN Telecom's SMS platform and API services remained operational throughout the incident. After Banglalink resolved the issue, delayed messages were delivered successfully, and normal service operation was restored.**
